

## "My Favourite Teacher"

We did quite a lot of subjects at school. They were: Biology, geography, Literature, Chemistry, Russian and others. Every teacher asked for equal and adequate attention to his subject and it was not an easy work to do. I knew that all the subjects were important, but still I was always indifferent to exact sciences. Since my childhood I have been fond of reading. My favourite subjects were Literature and languages.

And I'd like to tell you about my favourite teacher. Her name is Narine Hajkova Abramova. The subject he teaches is English. She is my favourite teacher. I am fond of her very much. She was born in 1961 in Baku. She graduated the Pedagogical Institute of Foreign Language in Baku in 1985. From 1996 she worked at Kulbakovo School as an English teacher. Now Abramova Narine Hajkova is retired but she still teaches pupils to pass entrance exams to the Institute.

I like this teacher. She is my best teacher. That's why I liked English very much. Most of all I liked this subject. I read English books, tried to translate some stories from newspapers from English into Russian and vice versa. I had some English handbooks and they were of great help to me when I studied English Grammar and did some exercises. I knew that the best way to improve your language skills and habits was to work at a language laboratory. But there was no good language laboratory at our school. And I spent plenty of time at home listening to the tapes, imitating the sounds and intonations of the native speakers of English. I was working hard at my pronunciation because my teacher Narine Hajkova said that it was my weak point. Every day I spoke English with my teacher. And she said that I was making good progress in the language. Her lessons were very interesting. It was my favourite lessons, I adored them very much. That's why I decided to become a teacher of English language. We have three generations of English teachers in our family.

### **New words:**

adequate- достаточный; indifferent- равнодушный; exact sciences- точные науки; translate- переводить

### **Answer the questions:**

1. What subjects did you do?; 2. Did you like them all?; 3. What was your favourite subject?
